Rohit Kamineni

Systems Analyst at Cigna Healthcare | MS Business Analytics & PM, UConn | Former Kroger | Data Engineer & Analyst | Data, ML & Cloud Enthusiast | BITS Pilani, Hyderabad
King of Prussia, Pennsylvania, United States

Summary

I am a Systems Analyst with over four years of experience working across data engineering, analytics, and enterprise data systems in complex, large-scale environments. My work sits at the intersection of business, data, and technology, where I focus on enabling reliable data flow, clear system design, and effective collaboration across cross-functional teams.

Currently, I support healthcare data and application ecosystems at Cigna Healthcare through a consulting engagement. I work with Cigna via Tata Consultancy Services, and am engaged with TCS through Realtek Consulting LLC. In this role, I analyze and document complex system architectures spanning cloud and on-prem environments, ensuring accurate, secure, and compliant data movement across multiple platforms and databases.

My responsibilities include building system mapping documents, designing and maintaining data models, developing data dictionaries, and analyzing data flows to identify gaps, risks, and optimization opportunities. I work closely with business stakeholders to gather and clarify business, functional, and non-functional requirements, and translate them into clear technical documentation for development teams. A core part of my role is bridging the gap between business and engineering through open communication and cross-functional collaboration.

I bring strong hands-on experience with SQL, Oracle SQL, Excel, Informatica, AWS, Python, and Agile practices, along with enterprise databases and distributed systems. I regularly analyze high-volume data across heterogeneous platforms, support database management activities, and ensure smooth integrations between cloud and on-prem infrastructure while adhering to healthcare data governance and HIPAA standards.

Alongside my systems work, I maintain a strong interest in data engineering. My background includes building scalable data pipelines and supporting analytics platforms using modern cloud and big data technologies.

I hold a Master's degree in Business Analytics and Project Management from the University of Connecticut and enjoy working on technically complex, data-intensive problems in regulated domains such as healthcare.

Core Tools & Technologies:

SQL, Oracle SQL, Excel, Informatica, AWS, Python, Agile, PySpark, Kafka, Databricks, BigQuery, Tableau, Power BI, Oracle DB, DB2, DBeaver, Toad, PyCharm, Qlik, JIRA

Experience

The Cigna Group

Systems Analyst

December 2025 - Present (3 months)

Bloomfield, Connecticut, United States

Working as a Systems Analyst supporting large-scale healthcare data and application ecosystems at Cigna Healthcare through a consulting engagement. I consult for Cigna via Tata Consultancy Services and am engaged with TCS through Realtek Consulting LLC.

In this role, I focus on ensuring reliable, compliant, and efficient data flow across complex hybrid architectures involving cloud and on-prem systems.

Key Responsibilities and Contributions:

- Build and maintain detailed system mapping documents to capture end-to-end data movement across applications, databases, and integration layers
- Design and develop logical and physical data models to support analytics, reporting, and operational use cases

- Analyze complex data systems to ensure smooth, accurate, and performant data flow across distributed architectures
- Create and maintain comprehensive data dictionaries defining data elements, metadata, transformations, and lineage
- Analyze and document business, functional, and non-functional requirements, translating them into clear technical specifications
- Bridge communication gaps between business stakeholders, functional teams, and development teams to ensure shared understanding and execution
- Enable and manage cross-functional collaboration across business, data engineering, application, and infrastructure teams
- Analyze large volumes of data across multiple platforms and heterogeneous databases to identify inconsistencies, gaps, and optimization opportunities
- Ensure seamless data integration between cloud and on-prem environments, including databases and messaging systems
- Support database management activities including query optimization, validation, data integrity checks, and issue resolution
- Ensure adherence to healthcare data governance, security standards, and compliance requirements including HIPAA
- Support Agile delivery processes through backlog refinement, documentation, sprint planning, and stakeholder alignment

RN Infusion

Data and Business Insights Analyst

August 2025 - December 2025 (5 months)

Malvern, Pennsylvania, United States

Designed the company's centralized cloud data platform for EMR, scheduling, and billing systems.

Digitized historical and active clinical records into secure, compliant, queryable datasets.

Built real-time BI dashboards for scheduling, patient outcomes, inventory usage, and revenue cycle metrics.

Automated reporting and implemented data governance workflows, improving accuracy and reducing manual work.

Ensured HIPAA compliance by maintaining secure access, audit logs, and proper documentation.

Supported business growth through forecasting, trend analysis, and referral insights across multi-county operations.

JerseySTEM

Data Engineer

March 2025 - July 2025 (5 months)

Hartford, Connecticut, United States

Engineered and maintained ETL pipelines using Integrate.io and Fivetran to streamline data ingestion across multiple internal tools and cloud platforms.

Built automated dashboards in Looker and SQL Warehouse to track operational KPIs, program impact, and volunteer engagement metrics for executive stakeholders.

Optimized data workflows through advanced Excel processing and SQL transformations, reducing manual reporting efforts and improving data accuracy by 40%.

Integrated applicant tracking data from iCIMS, Salesforce to support analytics on recruitment funnels and volunteer lifecycle tracking.

Contributed to developing a centralized data engineering strategy, leveraging GitHub for version control and agile collaboration across teams.

Ananda

Technology Consultant Intern

August 2024 - December 2024 (5 months)

Hartford, Connecticut, United States

Implemented and evaluated AI models to build and optimize chatbot interactions and enhance user engagement for a cryptocurrency-focused platform.

Analyzed crypto trading signals to uncover optimal trading strategies using predictive analytics, technical indicators, and risk frameworks.

Translated analytical insights into actionable recommendations and contributed to a strategic AI roadmap for client-facing solutions.

Accomplished the integration of analytical insights from the cryptocurrency trading signals with the chatbot.

UConn Health

Peer Counselor

June 2024 - December 2024 (7 months)

Farmington, Connecticut, United States

Providing mentorship and guidance to high school students interested in health professions. My responsibilities include mentoring, assisting with educational activities, leading field trips, and ensuring a supportive and enriching experience for participants.

University of Connecticut, Department of Dining Services

Student Employee

October 2023 - September 2024 (1 year)

Storrs, Connecticut, United States

Assisting in the daily operations of UConn's dining services, I ensure efficient service and a positive dining experience. My role involves multitasking across various stations, maintaining high standards of hygiene, and providing excellent customer service, contributing to the smooth functioning of the department.

Kroger Technology & Digital

3 years 11 months

Data Engineer

August 2019 - June 2023 (3 years 11 months)

Bengaluru, Karnataka, India

Consulting engagement via ZopSmart at Kroger Technology.

- Designed and deployed real-time ETL pipelines using PySpark, Databricks, and Airflow, processing over 2TB/day of product interaction logs—boosting personalization accuracy across Kroger's digital storefront by 23%.
- Built a GCP-based data ingestion framework integrating Kafka, REST APIs, and GCS for sub-minute latency analytics, enabling marketing and ops teams to run scalable ML workloads in BigQuery.
- Architected a cost-effective data lake solution with GCS, Dataflow, and Glue Catalog, reducing pipeline failures by 30% and improving report turnaround times from hours to minutes.

- Led MLOps initiatives for sales and loyalty models using Vertex AI; implemented CI/CD pipelines and automated retraining workflows, reducing model drift by 18% and cutting deployment cycles by 60%.
- Created reusable SQL and dbt models for SCD Type-2 handling, aggregation logic, and anomaly detection—automating weekly reports and saving ~60 engineer hours/month.
- Developed Tableau dashboards connected to BigQuery datasets, empowering 50+ category managers to visualize customer behavior and SKU trends across 100+ stores.

Recognition & Leadership:

- Recognized with the Pivot Polaris Award for high-impact engineering delivery.
- Conducted 300+ interviews for technical hiring across SDE and Data Engineering roles.
- Mentored 20+ interns across two cohorts; 80% received full-time offers or project extensions.

Software Development Engineer

August 2019 - December 2019 (5 months)

Bengaluru, Karnataka, India

Consulting engagement via ZopSmart at Kroger Technology.

- Supported 15M+ daily API requests by building and scaling the SpringBoot-based "Products BFF" microservice, facilitating critical e-commerce functionality across Kroger's online platform.
- Migrated legacy services to a 3-tier architecture on On-Prem Kubernetes, embedding observability hooks and improving SLA tracking by 40%.
- Developed the "Radon" framework for the Java services team, enabling annotation processing, Kafka support, and CI/CD standardization across multiple engineering squads.
- Authored robust technical documentation and onboarded new engineers to internal frameworks and deployment workflows.

Tcube

Data Engineer

January 2019 - June 2019 (6 months)

Hyderabad, Telangana, India

- Built Python- and SQL-based batch pipelines to aggregate logistics data from multiple carriers, improving data availability and quality for downstream analytics.

- Automated ingestion and cleansing of operational data in collaboration with ERP consultants, leading to real-time KPI dashboards that accelerated warehouse and transport decision-making.

Carborundum Universal Limited

Summer Intern

May 2017 - July 2017 (3 months)

Chennai, Tamil Nadu, India

Developed an innovative safety alert system at Carborundum Universal Limited, leveraging Arduino and GPS modules to ensure real-time location tracking and hazard alerts. Demonstrated the project's large-scale implementation potential, presenting a comprehensive analysis to senior management. This initiative highlighted the system's ability to enhance workplace safety and efficiency, positioning it as a key solution for broader adoption within the company's operations.

Education

University of Connecticut

Master's degree, Business Analytics And Project Management · (August 2023 - December 2024)

Birla Institute of Technology and Science, Pilani

Bachelor of Engineering - BE (Hons.), Electronics and Communications Engineering · (January 2015 - June 2019)
